ANALYTICS

Data is the new gold

Digitalisation changes everything. **Data is the new gold.** The Internet has been up to now the medium of the people – the communication and the consumer behaviour have been determined and used commercially.

Now the **Internet of Things (IoT)** links **physical objects to the virtual world** and makes their inner workings transparent. A global network of sensors, devices and products provides an unprecedented **spectrum and potential for analysis**, enabling your company to optimise existing processes and reduce costs. Unique new values could be created for your digitised company through innovative and **customer-oriented products, and service solutions.**

GEMMACON

SPEED

Real time reaction through automated data processing

The equipment of devices and components with **Industry 4.0 features** (sensors, actuators, machine-oriented software applications) and their networking form the basis for a quick reaction. Data about products and their use are measured, centrally collected, processed and analysed in real time.

Take advantage of the new technologies and manage **quick reaction times through process optimisation, product improvement and customer satisfaction evaluation!**

QUALITY ANALYTICS

Product optimisation through intelligent analysis

Processes have a direct impact on the product quality. The sooner a quality problem is detected, the lower is the impact on quality costs and customer satisfaction. Networked products and processes generate essential data through sensors and software.

Quality Analytics enables intelligent analysis, detects patterns and connections, and generates predictions – the basis for making better decisions.

What works in the field? That's the interesting question. Go with Quality Analytics one step further – do not only react, but convert the new insights into profitable and customer-oriented service features!

SENSORS

50 billion objects will be connected

Until 2020 more than 50 billion objects will be able to communicate world-wide with each other. **There will be 10 times more internet-connected devices than connected people in the world.**

Seize your opportunities in the new digital-based world!

QUALITY REPORTING

Create valuable decisions from the flood of information

You can understand and unleash the potential of the data through intelligent and easy to visualize reports. **Transform the data flow into crucial information.** Make **better decisions through attractive and user-oriented quality reports** – start today!

GEMMACON

QUALITY ANALYTICS WITH GEMMACON

Our services – we dig for your data gold

 **Potential Analysis of the existing data landscape**

 **Quality Data Analysis – design, implementation and operating**

 **Quality Reporting – user-friendly, attractive preparation of quality data**

 **Construction of system architecture and secured data storage (Cloud)**

 **Reduction of warranty and goodwill costs (W&G) through Predictive Analytics**
